Better = Care

Coastal govern

Our goal is to improve the li
coastal areas through bett

Embracing vulnerabil

The condition of the Australian coast is di
global environmental change and urban
integrated coastal management efforts.

We need to urgently change how we thin
environments, exploring new and better v

Research focus

Our research seeks to:

1. **Identify** the types of social-ecologic
2. **Critically analyse** how vulnerability
coastal governance approaches
3. **Assess** the implications for coastal
vulnerability and change

Dr Carmen Elrick-Barr

Senior Research Fellow | School of Law and
Society

celrick@usc.edu.au

Carmen applies expertise in climate
change vulnerability assessment and
adaptation planning to lead work on
existing coastal governance
arrangements and coastal
vulnerability.

Emeritus Professor Tim Smith

tsmith5@usc.edu.au

Professor Smith is the overall project
lead.

Associate Professor Dana Thomsen

dthomsen@usc.edu.au

Professor Thomsen is an expert in
sustainability communication and
advocacy and leading work on coastal
governance innovations.

- [Professor Ryan Plummer](#) - Director of the Environmental Sustainability Research Centre (ESRC) Brock University, where his program of research concerns the governance of social-ecological systems.
- [Assistant Professor Jessica Blythe](#) - human geographer with research expertise in ocean governance, sustainable transformations and climate change adaptation.
- [Professor Iain White](#) - environmental planner whose interdisciplinary research explores institutional change with regard to new forms of spatial development and climate change adaptation.
- [Associate Professor Daniel Henstra](#) - political scientist who studies the governance of complex policy areas such as climate change adaptation, emergency management and flood risk management.

PhD Students

- **Dr Miguel Frohlich** - an environmental planner and lawyer whose research explores how legal frameworks for coastal management can influence the adoption of adaptive management.
- **Dr Jonathan Raikes** - applies his experience working on international disaster risk reduction strategies to investigate the intersection of governance for disaster risk reduction and sustainable development goals in Australia and Canada.
- **Pippa Huddleston** - an environmental planner who will draw on her practical experience in infrastructure planning to compare governance tools in coastal infrastructure retreat in Australia, New Zealand and the Pacific.
- **Angela Mallette** - applies her experience working in municipal climate change adaptation planning to explore opportunities for learning through Canadian and Australian case studies.

Western Australian Coastal & Marine Network

Dr Ailbhe Travers: Network Manager
Vice-Chair: Kate Sputore

<https://wacmn.net/>

WACMN IS A STATE-WIDE MEMBERSHIP NETWORK FOR COASTAL & MARINE STEWARDS

We connect members from across community, industry, research and government as a cross-sector stewardship network that reaches from the north coast to the south coast of WA.

Enhancing the Understanding of the Value Provided to Fisheries by Man-Made Aquatic Structures

FRDC 2018-053

Monitoring of Community Coastal Values

The PNP and UWA delivered a pilot community values project in the PNP region from Rockingham to Busselton. The project utilised the CoastSnap community beach monitoring sites as a tool to support the collection of real-time community coastal social values.

A new vision for coastal resilience: Engaging communities through art to design a transformative future

Natasha Pauli · Carmen Elrick-Barr · Abbie Rogers · Daniel Jan Martin · Michael Cuttler · Arnold van Rooijen · Rosie Halsmith · Ellie Biggs · Kate Driver · Sofie Nielsen · Caine Holdsworth · Liam Mouritz · Alice Ford

Coastal community resilience project

Using research to build community resilience to coastal climate hazards in Australia.

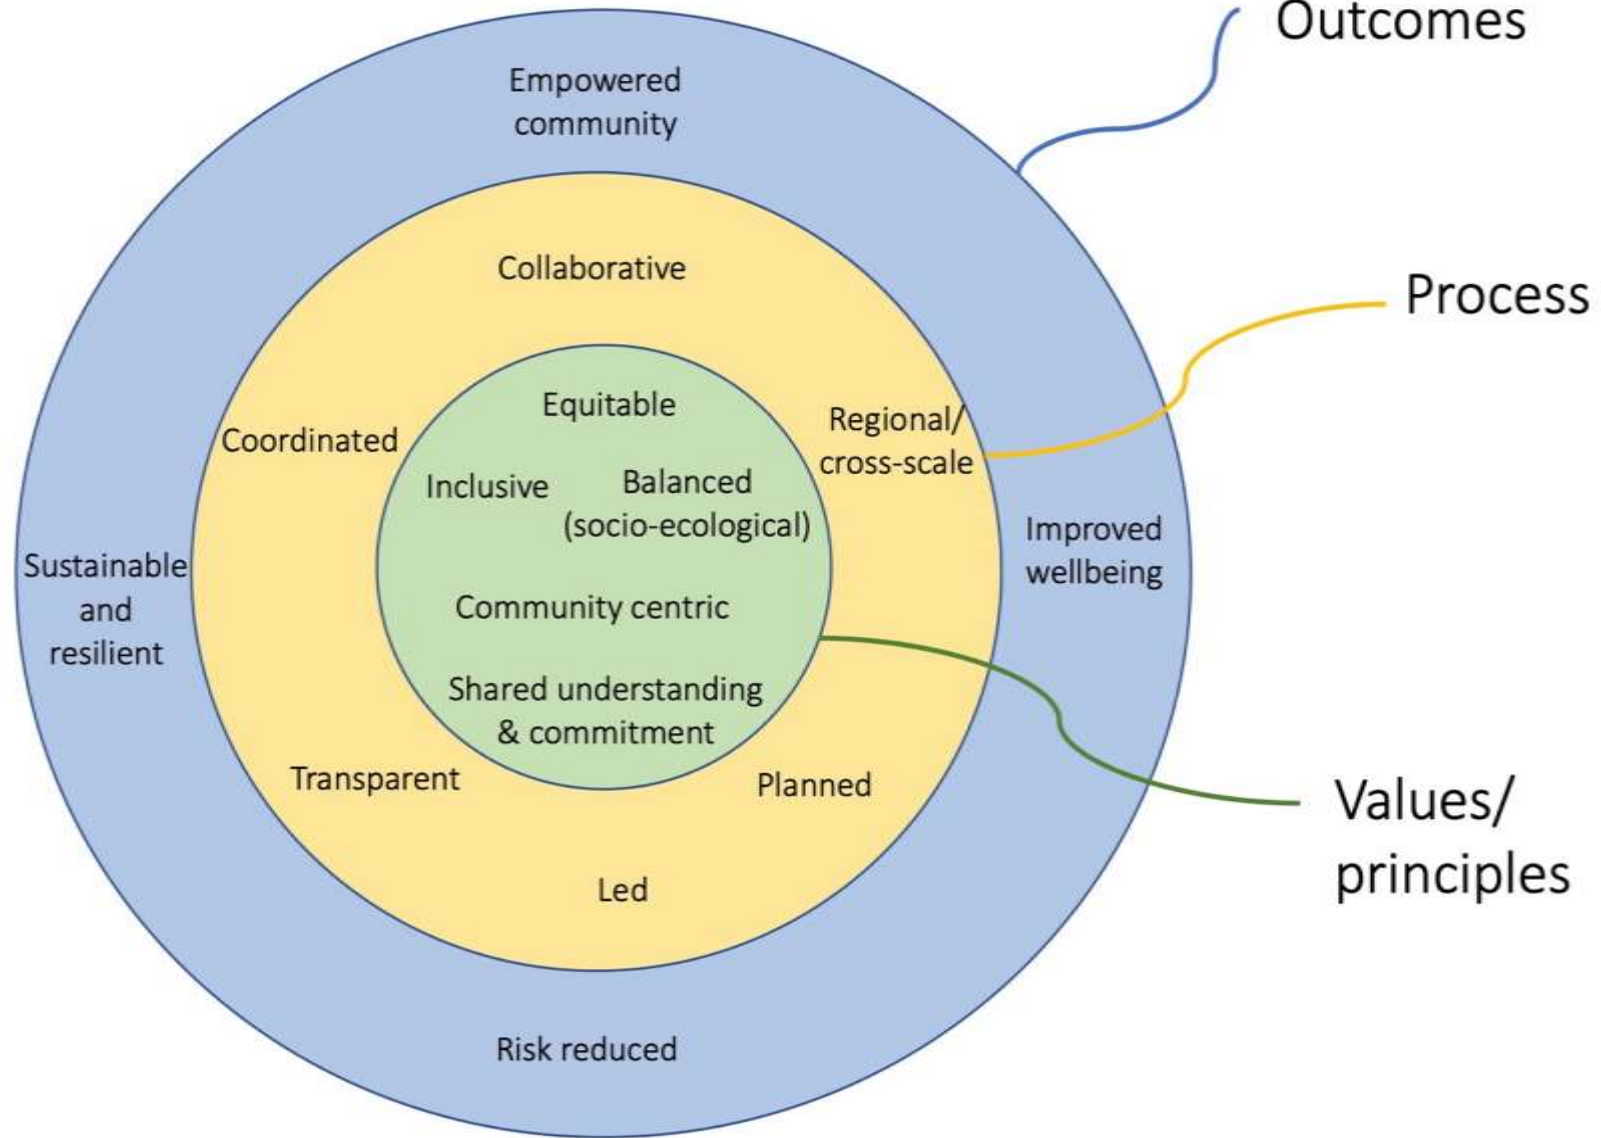

- [Professor Tim Smith](#) Lincoln University, New Zealand: is an expert in coastal governance and climate change adaptation
- [Professor Mark Pelling](#) King's College, United Kingdom: is an expert in the institutions and social relationships that shape vulnerability and adaptation to natural disasters, including those associated with climate change.
- [Emerita Professor Kate Brown](#) University of Exeter, United Kingdom: is an interdisciplinary social scientist specialising in environmental change, vulnerability and resilience.
- [Professor Bruce Glavovic](#) Massey University, New Zealand: Bruce's research centres on the role of governance in building resilient and sustainability communities, focusing on coastal communities.
- [Professor Ryan Plummer](#) Brock University, Canada: leads a multi-faceted program of research broadly concerning the governance of social-ecological systems.

Other team members

- [Dr Marcus Bussey](#) University of the Sunshine Coast, Australia: is a futurist and historian whose research focus explores cultural change via the phenomenology of body wisdom, anticipatory aesthetics and educational futures.
- [Samantha Willcocks](#) (PhD candidate) is a creative imagineer and community change-maker exploring inner and outer dimensions of adaptive capacity, and eco-embodied cognition for resilience, through a participatory, trans-disciplinary approach in Africa and Australia.

Australia

“A lot of providers are getting paid less than what it costs [to deliver services], and we’re expected to get the gap from the clients ...So the business of aged care has been disrupted by the government and it is supposed to be going towards a market economy.” QLDVuln05

“.. we try to innovate as much as we can. We can innovate somewhat. But every program funded by the government, about 95% of our funding, has a hundred-page manual on how to do it.” QLDVuln05

“the elected member body [are] elected on a platform of debt management and no rate rises. So convincing elected members to do something that is innovative but is going to cost more money, that’s a hurdle” SACM01

“I think there’s a good history within this council of individual operators having great ideas, but it always costs money. So, trying to find a way of doing that in a cost neutral situation is the challenge” SACM02

CAPACITY
43%: 13 mentions

GOVERNANCE
33%: 10 mentions

“[the ability to innovate is dictated by] how government want to do things, how they set their goals” SAVuln02

“[engineers] have to meet the Australian standards. So looking at ways we can incorporate more vegetation ...whilst still providing the same function [is challenging].” VicCM06

“So I think you need to have more experience, obviously more study [to effectively innovate]” TasVuln05

CULTURE
23%: 7 mentions

“It’s much harder in government. You’re not allowed to fail. ...even though they’re saying, oh, yes, it’s all fine. No, you’re not allowed to fail.We’ll do a trial, and we’ll do another pilot because it becomes a risk averse way of saying, ‘how are we going to try something [new]?’” SACM01

“I think some of the barriers [are] culture and the idea that when you go for procurement, that your lowest cost always comes up first.” SACM01

“[it depends] how many people promote it.....If it doesn’t feel much worse, nothing is going to change” SAVuln02

	Coastal	Community
Actions considered innovative	<p>Technological developments (e.g., improved information on coastal change)</p> <p>Forward planning activities</p> <p>Infrastructure (e.g., seawalls, solar farms, foreshore developments)</p> <p>Improvements in risk management</p> <p>Cross-jurisdictional networks</p> <p>Policy or legislative change</p> <p>Citizen science (e.g., CoastSnap)</p> <p>Community awareness-raising (e.g., Coastal Ambassadors)</p>	<p>Technologies that improve service provision (e.g., health apps, volunteer recruitment apps)</p> <p>Change in problem-solution framing (e.g., listening programs; mobile housing)</p> <p>Collaborative service delivery (e.g., service hubs)</p>
Objective of innovation	<p>Address risk (e.g., flood risk)</p> <p>Build organisational capacity (e.g., improve knowledge/understanding of risk)</p> <p>Increase community awareness (e.g., community engagement in adaptation planning, understanding of coastal processes)</p>	
Who is involved?	<p>Local government</p> <p>State government</p> <p>Consultants/researchers</p> <p>Local community members/beach users</p>

FIND OUT MORE

FIND OUT MORE

From

- Managing the physical impacts of select climate hazards
- Unquestioned anthropocentric foci
- Legislation and data that reflect historic contexts (European dominated)
- Sectoral isolation across SES vulnerabilities (fragmentation and duplication)
- 'Hidden' social vulnerabilities

- Limited support/resources to local communities
- Failure avoidance

Towards

- Seeing and managing coasts as complex SES facing cumulative risks
- Critical consideration of framing
- Mechanisms that reflect contemporary contexts and cultural aspirations
- Cross-sectoral (and cross-scale) integration and collaboration
- Acceptance of and action to address systemic inequalities, e.g., procedural justice
- Investing in communities to enhance existing capabilities
- Experimentation and permission to fail
